

memoirs of molar pregnancy pdf

Postpartum psychosis is a rare psychiatric emergency in which symptoms of high mood and racing thoughts (), depression, severe confusion, loss of inhibition, paranoia, hallucinations and delusions set in, beginning suddenly in the first two weeks after childbirth. The symptoms vary and can change quickly. The most severe symptoms last from 2 to 12 weeks, and recovery takes 6 months to a year.

Postpartum psychosis - Wikipedia

Lisinopril is a medication of the angiotensin-converting enzyme (ACE) inhibitor class used to treat high blood pressure, heart failure, and after heart attacks. For high blood pressure it is a first line treatment, but works less well in black people. It is also used to prevent kidney problems in people with diabetes. Lisinopril is taken by mouth. Full effect may take up to four weeks to occur.
