A microlens is a small lens, generally with a diameter less than a millimetre (mm) and often as small as 10 micrometres (μm). The small sizes of the lenses means that a simple design can give good optical quality but sometimes unwanted effects arise due to optical diffraction at the small features. A typical microlens may be a single element with one plane surface and one spherical convex ...

Optical fibers have a wide number of applications. They are used as light guides in medical and other applications where bright light needs to be shone on a target without a clear line-of-sight path. In some buildings, optical fibers route sunlight from the roof to other parts of the building (see nonimaging optics). Optical-fiber lamps are used for illumination in decorative applications ...

Introduction. This manual is the basic textbook for anyone writing an ASTM standard. A study of Parts A, B, C, or E will show the proper form for the principal types of standards including a detailed explanation of how to write each section, from the title to the appendixes. Within Parts A, B, C, and E, the first section lists the preferred sequence of headings and indicates whether these ...

Le concept naît pendant et après la Première Guerre mondiale : des prototypes d'avions sans pilote radio-commandés ont ainsi vu le jour, avec des tentatives de « torpilles aériennes » (telle le Kettering Bug) contrôlées par télégraphie sans fil et embarquant un gyroscope, mais ce type d'avions n'a jamais été opérationnel sur le terrain [20], [21].
