

molecular cloning a laboratory pdf

In molecular cloning, a vector is a DNA molecule used as a vehicle to artificially carry foreign genetic material into another cell, where it can be replicated and/or expressed (e.g.- plasmid, cosmid, Lambda phages). A vector containing foreign DNA is termed recombinant DNA. The four major types of vectors are plasmids, viral vectors, cosmids, and artificial chromosomes.

Vector (molecular biology) - Wikipedia

In molecular biology, ligation is the joining of two nucleic acid fragments through the action of an enzyme. It is an essential laboratory procedure in the molecular cloning of DNA whereby DNA fragments are joined together to create recombinant DNA molecules, such as when a foreign DNA fragment is inserted into a plasmid. The ends of DNA fragments are joined together by the formation of ...

Manual The resulting transcript of the recombinant vector is predicted to fold back on itself to form a 19â€“base pair stem-loop structure. Analysis indicates that the stem-loop precursor transcript is quickly cleaved in the cell to produce a functional siRNA (4).

Overview of JBC's publication process. For initial submission, authors should prepare their manuscript as a single PDF file. At this stage, the primary goal is for the manuscript to contain the necessary information to enable a full scientific assessment, so while all sections of the manuscript need to be present, references need to be complete, and figures and tables need to be clearly ...
