Climate change adaptation is a response to global warming (also known as "climate change" or "anthropogenic climate change"), that seeks to reduce the vulnerability of social and biological systems to relatively sudden change and thus offset the effects of global warming. Even if emissions are stabilized relatively soon, global warming and its effects should last many years, and adaptation ...

How to reconcile the strict limitations of scientific method with reasonable expectations based on probability and risk have confounded the human-caused global warming (AGW) argument. The reality is sea level will rise. However, there are other oceanic forces that will have economic consequences prior to major sea level rise. Storm strength, droughts, flooding, crop yields and thermal limits ...

One of the most annoying things about climate forecasts is the apparent need to predict catastrophe. Of course, it makes good press, like the latest from Bryan Walsh at Time, Climate Change Could Cause the Next Great Famine. While such theories can always find a home with some learned academics, for those who "do" rather than "teach", the world is a very different place.
