A hierarchical core double-shell Ti-doped  $\text{LiMnPO}_4 @ \text{NaTi}_2(\text{PO}_4)_3 @ \text{C}/\text{3D}^{\bullet}\text{G}$  architecture is smartly constructed via in situ synthetic methodology, and exhibits outstanding rate capability and superior cyclic stability for advanced lithium-ion batteries as a competitive cathode, benefiting from synergetic contributions from the integrated design rationales.

A supercapacitor (SC) (also called a supercap, ultracapacitor or Goldcap) is a high-capacity capacitor with capacitance values much higher than other capacitors (but lower voltage limits) that bridge the gap between electrolytic capacitors and rechargeable batteries. They typically store 10 to 100 times more energy per unit volume or mass than electrolytic capacitors, can accept and deliver ...

### **Supercapacitor - Wikipedia**

Developing a means for true bottom-up, selective-area growth of two-dimensional (2D) materials on device-ready substrates will enable synthesis in regions only where they are needed.

### **IOPscience**

Transformation of aromatic azides on the silver surface was studied by atomic force microscopy in ultrahigh vacuum. In their Communication (DOI: 10.1002/anie.201812334), P. Jelínek, I. Starý et al. show that 9-azidophenanthrene decomposes into an elusive nitrenoid intermediate chemisorbed on the surface.

### **Angewandte Chemie International Edition: Early View**

Studies in surface science have yielded many perspectives and techniques to solve the two biggest issues in the synthesis of two dimensional materials: degradation during transfer and restriction of applying functional substrates.

### **Synthesis of two dimensional materials on extremely clean**

The SOFC-stack is a multilayer structure consisting of ceramic and metallic materials. There are different types of SOFC concepts, basically tubular and planar ones which differ in the single cells design and arrangement, interconnector materials and gas flow.

Graphene is an allotrope (form) of carbon consisting of a single layer of carbon atoms arranged in a hexagonal lattice. It is a semimetal with small overlap between the valence and the conduction bands (zero bandgap material). It is the basic structural element of many other allotropes of carbon, such as graphite, diamond, charcoal, carbon nanotubes and fullerenes.

1. Introduction. Nanocomposites are composites in which at least one of the phases shows dimensions in the nanometre range (1 nm = 10<sup>-9</sup> m) 1.Nanocomposite materials have emerged as suitable alternatives to overcome limitations of microcomposites and monolithics, while posing preparation challenges related to the control of elemental composition and stoichiometry in the nanocluster phase.
