equilibrium to non-equilibrium thermodynamics. We begin by reviewing the two hypotheses on which the

derivation of the Einstein equation of state given in Ref. [4] is based. Next we present that derivation, and then generalize it to allow for dependence of the entropy on the Ricci scalar. We end with several comments.

The Journal of Non-Equilibrium Thermodynamics serves as an international publication organ for new ideas, insights and results on non-equilibrium phenomena in science, engineering and related natural systems. The central aim of the journal is to provide a bridge between science and engineering and to promote scientific exchange on a) newly observed non-equilibrium phenomena, b) analytic or numeric modeling for their interpretation, c) vanguard methods to describe non-equilibrium phenomena.

Non-equilibrium thermodynamics was founded by Onsager.^{11,12} The theory was further elaborated by de Groot and Mazur¹³ and Prigogine.¹⁴ The theory is based on the hypothesis of local equilibrium: a volume element in a non-equilibrium system is in

CHAPTER 1 Non-Equilibrium Thermodynamics in Industry

Non-equilibrium thermodynamics is a branch of thermodynamics that deals with physical systems that are not in thermodynamic equilibrium but can be described in terms of variables (non-equilibrium state variables) that represent an extrapolation of the variables used to specify the system in thermodynamic equilibrium. Non-equilibrium thermodynamics is concerned with transport processes and with the rates of chemical reactions.
