Parametric statistics is a branch of statistics which assumes that sample data comes from a population that follows a probability distribution based on a fixed set of parameters. Most well-known elementary statistical methods are parametric. Conversely a non-parametric model differs precisely in that the parameter set (or feature set in machine learning) is not fixed and can increase, or even ...

Announcements: Math E-21b Course Information and Syllabus (Spring 2019) PDF version (Spring 2019)  
These may still be amended slightly, but the essential details should be the same. Classes will meet every Thursday evening from 7:40pm to 9:40pm tentatively in Harvard Hall 201 (next to Johnson Gate) starting January 31. There will also be an optional weekly problem sessions (conducted by TAs ...

**Biostatistics for Biomedical Research**

While I have not done research in this area myself, I am fascinated by the computer graphic technique known as non-photorealistic rendering. (Admittedly it is a little odd to name a field of study by what it is not.

**Stylized Depiction: Non-Photorealistic, Painterly and**

The LTC7820 is a fixed ratio high voltage high power switched capacitor/charge pump controller. The device includes four N-channel MOSFET gate drivers to drive external power MOSFETs in voltage divider, doubler or inverter configurations. The device achieves a 2:1 step-down ratio from an input voltage as high as 72V, a 1:2 step-up ratio from an inp
