Malnutrition increases the risk of infection and infectious disease, and moderate malnutrition weakens every part of the immune system. For example, it is a major risk factor in the onset of active tuberculosis. Protein and energy malnutrition and deficiencies of specific micronutrients (including iron, zinc, and vitamins) increase susceptibility to infection.

Epidemiology is the study and analysis of the distribution (who, when, and where) and determinants of health and disease conditions in defined populations.. It is the cornerstone of public health, and shapes policy decisions and evidence-based practice by identifying risk factors for disease and targets for preventive healthcare. Epidemiologists help with study design, collection, and ...

Please note: NPSA alerts were only updated to reflect changes in current safety knowledge or clinical care until the point their 'action complete' date was reached. Some of these 'action complete' dates for NPSA alerts, safety notices and rapid response reports were over 15 years ago. No NPSA publications have been updated since the closure of the agency in 2012, with the exception of key ...
